PFAS Reduction Solutions using GUARDIAN Water Systems

The Entipur GUARDIAN System safely reduces PFAS.

The heart of the GUARDIAN system is an advanced NSF/ANSI 61- certified and approved resin, ResinTech SIR110-HP. The resin efficiently and safely reduces various PFAS compounds, including PFOA and PFOS, and does not require backwashing or regeneration.

GUARDIAN system advantages:

- Removal of a wide range of PFAS species
- No connection to sewer or septic required
- System is always in service
- No wasted water
- Hardware is simple and reliable

The GUARDIAN water system will reliably and efficiently reduce a wide range of PFAS species to a safe consumption level.

PFAS

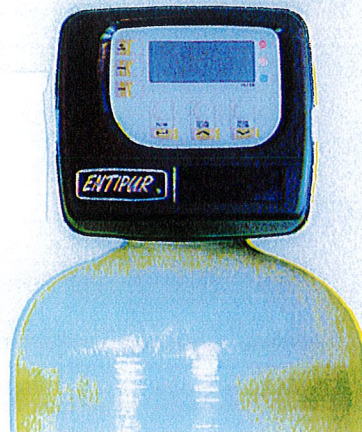

The removal of PFAS from drinking water has become a hot topic across the country. This is due to the fact that PFAS compounds are bio-permanent and do not break down naturally in the environment or the human body. Studies suggest that exposure to these chemicals may lead to cancer.

The US EPA's health advisory level for PFOA & PFOS is 4 parts per trillion (4 ppt) in drinking water.
